To whom it may concern this is a Freedom of Speech issue and is covered under the Constitution. Just so you know we here in Ct. when we get our traffic and weather forecasts from XM we are getting them for the Tri-State area so it does not interfere with the local broadcasts at all. If you have XM in your vehicle you now do not have to try to find a local station for the traffic or weather this means less time fiddling around with your radio and more time spent driving which should make the roads a safer place. One last thing; if these large monopolies that control the radio media would do a better job at expanding their play lists people such as myself would not have to pay to hear the music that we want to hear. I thank you very much for your time and attention to this matter.
